

Master Series®

Multi-function controls for demanding applications

4 Year Warranty

Elaborate multi-zone microprocessor based controls for demanding applications where many parameters may be controlled simultaneously in a single package.

The Master Series® controller line offers the ability to combine numerous features and functions in a single control package, eliminating the need for multiple discrete components, messy wiring and excessive mounting space. We offer standard platforms which can meet most applications or we can design a custom control unit to your exact system requirements. Our Master Series® allows you to combine any combination of specifications from our extensive library of products into a single, neat and comprehensive package.

PRODUCT SPECIFICATIONS

Multiple temperature, humidity, pressure, analog, digital and switch inputs.

Multiple relay, SSR, triac, FET, analog, digital, VDC and transmitter outputs.

Power options include VAC, VDC, and universal.

Any style connector including amp, molex, deustch, plug-in, and fast-on.

Computer interface includes RS 323, RS 485, USB, Ethernet, and CANbus.

Custom PCBs and housings.

Display options include onboard and remote LED digits or lights, LCD, & vacuum fluorescent.

Many more customer defined options available.
